EDUCATION

AMC Engineering College, Visvesvaraya Technological University (VTU)

Bengaluru, India

Bachelor of Engineering in Computer Science & Engineering

Aug 2024 – May 2028

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Linear Algebra, Discrete Mathematics, Operating Systems

TECHNICAL SKILLS

Languages: Python, Java, JavaScript (ES6+)

Frontend: HTML5, CSS3, Responsive Web Design, Progressive Web Apps (PWA)

Tools & Platforms: Git, GitHub, Vercel, VS Code, GitHub Actions

Concepts: AI/ML Fundamentals, RESTful APIs, Data Structures & Algorithms, Encryption & Authentication, Linear Algebra, Problem Solving

PROJECTS

NEXA | *JavaScript, HTML5, CSS3, PWA, AI Integration* | [GitHub](#)

2024 – Present

- Engineered a full-featured AI-powered productivity web application with task management, focus mode, smart reminders, and streak tracking, improving simulated user workflow efficiency
- Implemented Progressive Web App (PWA) support enabling cross-device installation and offline functionality, broadening accessibility across platforms
- Integrated AI-based productivity suggestion engine that analyzes user behavior patterns to provide personalized workflow recommendations
- Designed and built a fully responsive UI following mobile-first principles, ensuring consistent UX across all screen sizes

TrustNet | *JavaScript, Encryption Algorithms, Network Concepts* | [GitHub](#)

2024 – Present

- Architected a secure peer-to-peer networking system implementing trust verification protocols between nodes using encryption and authentication principles
- Applied symmetric/asymmetric encryption concepts for secure communication channels, demonstrating understanding of cryptographic fundamentals
- Built an interactive visualization dashboard to display real-time trust scores and connection graphs between network nodes

Theory2Real | *JavaScript, HTML5, CSS3, Educational Platform Design* | [GitHub](#)

2024 – Present

- Developed a structured CS learning platform that maps theoretical computer science concepts to real-world implementations, serving beginner developers
- Designed a distraction-free, accessible UI with clean typography and intuitive navigation, improving learner engagement and content readability
- Organized modular content architecture to support scalable addition of new topics and seamless navigation across learning modules

EXPERIENCE

Software Developer – AI & Frontend

2024 – Present

Independent GitHub Projects

Bengaluru, India

- Designed, developed, and deployed 3+ end-to-end web applications independently, managing full project lifecycle from ideation to production on Vercel with GitHub-based CI/CD workflows
- Applied AI fundamentals to integrate intelligent features (task prioritization, behavioral analytics, productivity suggestions) into user-facing applications used across devices
- Built accessible, responsive frontends using HTML, CSS, and JavaScript following modern web standards; established iterative development practices across all projects

Freelance & Open Source Developer

2024 – Present

Academic & Personal Projects

India

- Developed Python utilities and automation scripts for problem solving; practiced algorithmic thinking and data structure application across academic challenges
- Maintained structured Git repositories with descriptive commit histories and branching strategies, simulating professional version control and collaboration workflows
